Proficient in JavaScript, Python, HTML, CSS, Java, SQL, C#, React & React Native, WordPress, Git, jQuery, Bootstrap, and Webflow.

EXPERIENCE

Devopie, Toronto, Ontario

Lead Front-End Developer

Sept 2023-Present

- Created a company/client dashboard to be used for monitoring financials, displaying information and generating forms.
- Worked for several company clients such as:
 - Federal Conservative Party, Porter Airlines, Bet99 and etc.
- Integrated first and third-party APIs for payment processing, financial data retrieval, and other functionalities.
- Created a variety of email templates for company clients to be used for notifying users of profile information and account changes.
- Used Figma to collaborate with designers to develop user-friendly interfaces for financial applications and platforms.

Playline, Toronto, Ontario

Front-End Developer

March 2022-June 2023

- Developed several original pages on the company's website, including the landing page, login, and contest edit details. Also used advanced CSS techniques to create a custom layout to organize player details in a responsive and unique design.
- Collaborated with the backend developer to effectively organize games, thereby optimizing UX organization. Also conducted ongoing testing of UX experience to gauge and maintain customer satisfaction.
- Utilized React, CSS, HTML, JavaScript, React Native, and SQL to create, modify, and update code.

RealtyShop, Toronto, Ontario

Front-End Developer

May 2021-February 2022

- Used both WordPress and Webflow to design and optimize multiple web components and pages.
- Utilized PHP, React, JavaScript, and CSS to create responsive landing pages for the company.
- Tested and debugged several team projects and provided suggestions.

Durham College, Durham, Ontario

IT Researcher/Web Developer

October 2020-April 2021

- Researched upcoming new technologies and technological business projects.
- Wrote literature reviews, analyzing and examining academic journals to present information to my team.
- Assisted in developing a number of company projects using Python, JavaScript, jQuery, and Node.
- Used various APIs to track information, afterwards displaying it on an effective UX design that allowed the information to be easily understood
